# Assembly tips and general notes

Gently remove parts from the sheet. Punching them out can split the wood. If a part resists, score the tabs with a hobby knife.

Dry-fit all parts before gluing to confirm orientation and sequence.

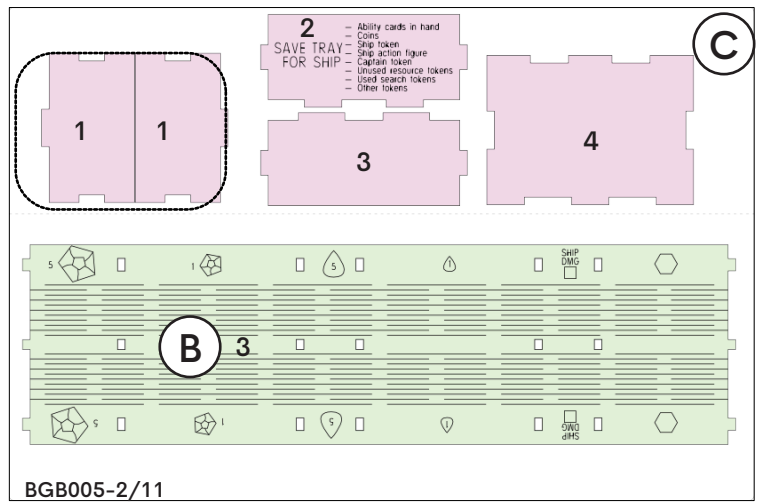

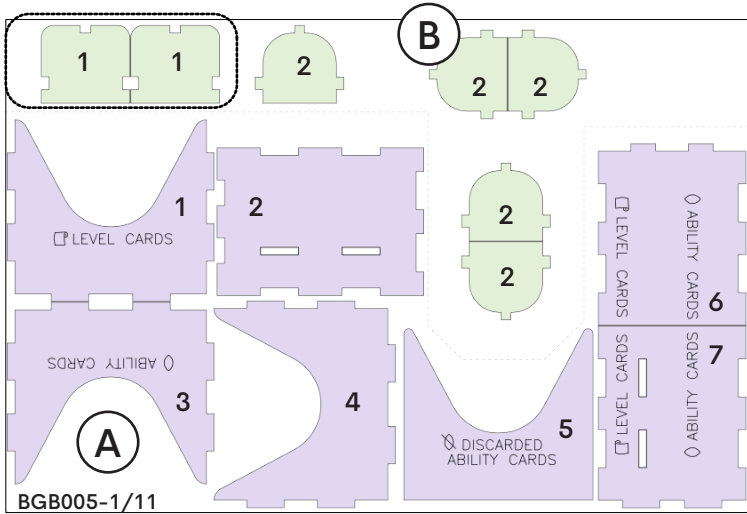

Apply a thin, continuous film of wood/PVA glue to one mating edge only. Glue isn't required for every joint, but it improves durability. Wipe any glue squeeze-out immediately with a clean cloth or paper towel.

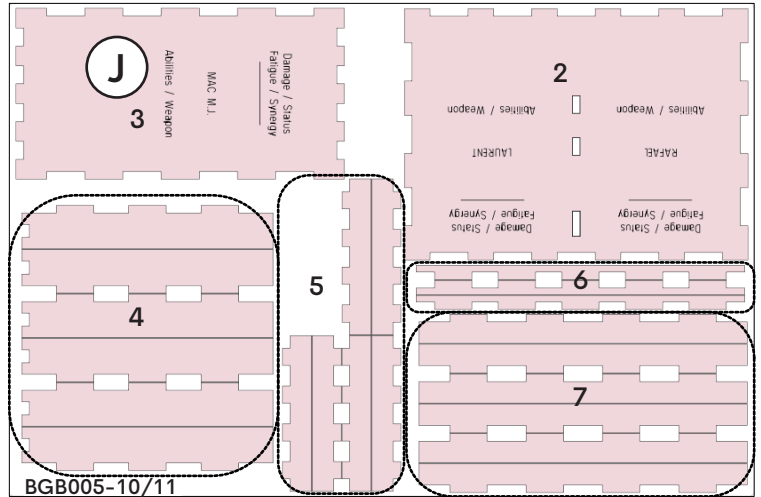

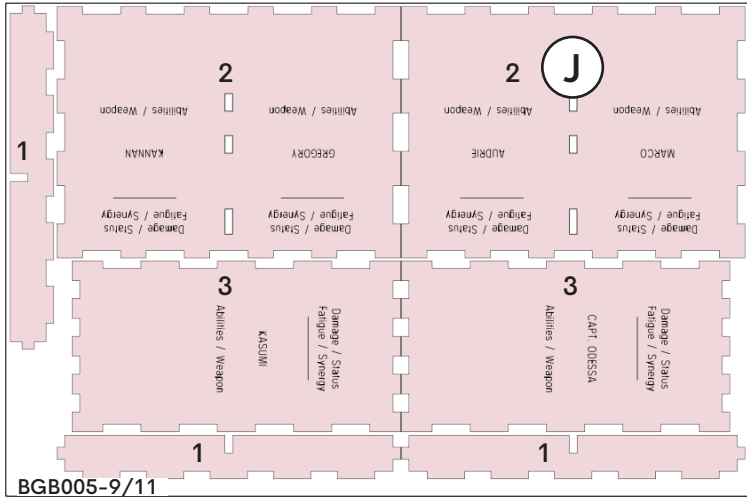

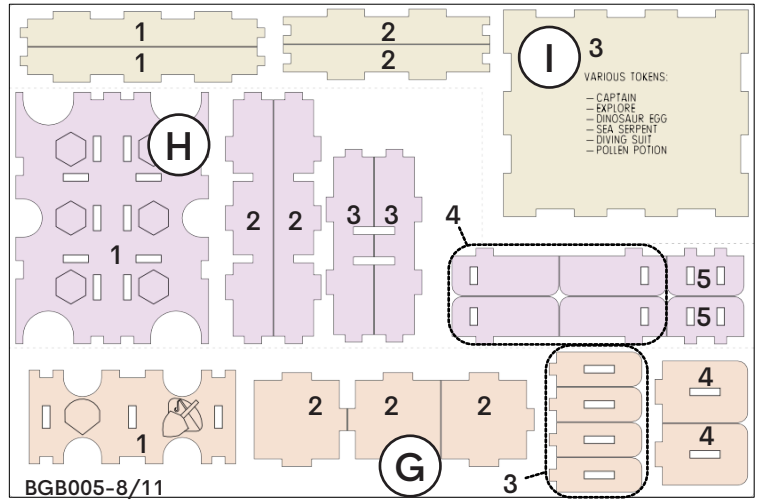

Due to natural variation in the wood, light taps with a rubber mallet may help seat tight joints.
